

Professional Summary

- Around **8 years of experience in full-stack application development**, contributing to enterprise projects across **Banking, Financial Services, Healthcare, HR & Payroll**, covering the complete Software Development Life Cycle from requirements through production support.
- Extensive experience working across **frontend and backend development**, building responsive user interfaces, reusable application components, business services, APIs, microservices, database integrations, and secure enterprise workflows.
- Hands-on experience with **cloud-based application development and deployment**, including containerized applications, scalable cloud environments, CI/CD processes, application monitoring, logging, and production troubleshooting.
- Strong experience in **application quality and testing**, including unit, API, integration, functional, regression, database, and end-to-end testing to ensure reliable and high-quality enterprise applications.
- Exposure to **AI-enabled application development and intelligent automation**, including integrating AI-driven capabilities into business applications and supporting data-driven features, workflow automation, and intelligent user experiences.

Technical skills

Programming Languages: Java , JavaScript, TypeScript, SQL

Frontend: ReactJS, Redux Toolkit, React Hooks, React Router, React Hook Form, Zod, Material UI, Bootstrap, HTML5, CSS3, Axios, Recharts

Backend & APIs: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Node.js, Express.js, Microservices, RESTful APIs, JAX-RS, SOAP, Event-Driven Architecture, Apache Kafka, AWS SQS, AWS SNS

AI/ML: Machine Learning, Supervised & Unsupervised Learning, Scikit-learn, TensorFlow, PyTorch, NLP, Generative AI, LLMs, Prompt Engineering, RAG, Embeddings, Vector Databases, AI/ML Model Integration, Model Deployment, MLOps

Databases & Persistence: Oracle, PostgreSQL, MySQL, MongoDB, Cassandra, PL/SQL, JDBC, HQL, Prisma ORM

Cloud & DevOps: AWS (EKS, ECS, EC2, S3, RDS, Lambda, API Gateway, IAM, CloudWatch, SQS, SNS), Azure DevOps, Azure App Service, Azure Blob Storage, Azure Database for PostgreSQL, Docker, Kubernetes, Jenkins, Maven, Gradle, Git, GitHub, SonarQube, AWS CodePipeline, CodeBuild, CodeDeploy, CI/CD

Security & Testing: Spring Security, JWT Authentication, Role-Based Access Control (RBAC), IAM, JUnit, Jest, React Testing Library, Postman, Functional Testing, Integration Testing, Regression Testing, API Testing, End-to-End Testing

Tools & Practices: IntelliJ IDEA, JIRA, Linux, Splunk, Log4j, SLF4J, Agile/Scrum, TDD, Design Patterns, SDLC

Professional Experience:

Client: Western Union, Austin, TX

Aug 2024 - present

Role: Sr. Full Stack Developer

Responsibilities

- Developed responsive **customer and employee-facing interfaces using React.js, TypeScript, HTML5, CSS3, and Material UI**, ensuring consistent functionality across desktop and mobile devices.
- Built reusable React components for **dashboards, forms, tables, navigation menus, status indicators, modals, alerts, and notification panels**, improving maintainability and UI consistency.
- Designed and implemented a **multi-step loan application workflow** covering personal information, employment details, financial information, loan requirements, document submission, and final application review.
- Implemented dynamic form handling and client-side validation using **React Hook Form and Zod**, validating financial inputs, contact details, required fields, and loan application information.

- Developed an interactive **loan payment calculator** allowing customers to estimate monthly payments based on loan amount, interest rate, and repayment term.
- Built an employee-facing **loan management dashboard** with search, filtering, sorting, pagination, application status tracking, customer details, and application review functionality.
- Implemented **Redux Toolkit, Axios, and Recharts** for centralized state management, REST API integration, and interactive visualization of loan applications, statuses, trends, and portfolio metrics.
- Developed backend services using **Node.js and Express.js**, implementing RESTful APIs to support customer and employee loan-management workflows.
- Designed REST API endpoints for **customers, loan applications, application statuses, employee reviews, documents, notifications, and authentication**.
- Integrated **PostgreSQL with Prisma ORM** to manage customer profiles, loan applications, financial information, employee reviews, and application-status data.
- Implemented **JWT-based authentication and role-based authorization (RBAC)** to securely control access for customers, loan officers, and authorized employees.
- Integrated **Apache Kafka** to support event-driven communication between backend services for loan application submissions, status changes, approvals, and document-processing events.
- Developed **Kafka producers and consumers** to publish and process loan workflow events asynchronously, reducing direct dependencies between application services.
- Implemented Kafka-based **notification processing** to trigger customer updates when loan applications were submitted, reviewed, approved, rejected, or required additional documentation.
- Supported application deployment and **CI/CD workflows using Git, GitHub, Azure DevOps, Docker, Azure App Service, Azure Blob Storage, and Azure Database for PostgreSQL**.
- Contributed to **AI-enabled loan processing capabilities** for analyzing application information and supporting intelligent loan-review and risk-assessment workflows.
- Performed **unit and component testing using Jest and React Testing Library**, validating React components, forms, user interactions, validation rules, and application behavior.
- Conducted **API, integration, functional, regression, and end-to-end testing using Postman**, validating REST APIs, Kafka-integrated workflows, authentication, frontend-backend integration, and data consistency.

Client: Legacy Health, Portland, OR

Role: Full Stack Developer

Sep 2022 - July 2024

Responsibilities:

- Developed responsive and interactive **ReactJS dashboards** for hospital administrators, doctors, and patients to manage patient appointments, provider schedules, patient queues, consultation status, and healthcare operational metrics.
- Built reusable **ReactJS components, Forms, Events, Router, and Flux-based components** for patient registration, appointment scheduling, provider availability, patient information, and healthcare dashboard functionalities.
- Developed frontend workflows for **appointment booking, cancellation, rescheduling, provider search, patient history, and consultation status**, integrating React components with backend RESTful APIs.
- Implemented interactive healthcare analytics views to display **patient volume, appointment trends, provider workload, department utilization, and average waiting times**, improving visibility into hospital operations.
- Implemented frontend validations, error handling, reusable UI components, and **REST API integration** to provide consistent and reliable user experiences across patient, provider, and administrative dashboards.
- Developed backend services using **Java, Spring, Spring Boot, and Spring MVC** to support patient management, provider management, appointment scheduling, billing, notifications, and healthcare operational workflows.
- Designed and developed **RESTful Web Services and Microservices** for Patient, Appointment, Provider, Billing, Notification, Analytics, and Document modules, enabling scalable and independently deployable backend services.
- Implemented **Spring Data JPA** persistence layers and utilized **Cassandra** for managing patient demographics, appointment history, provider information, healthcare events, and high-volume analytical data.

- Integrated **Apache Kafka** with Spring Boot Microservices and developed **Kafka producers and consumers** to enable asynchronous processing of appointment confirmations, cancellations, billing events, patient notifications, and provider schedule updates.
- Implemented **Apache Camel routes** for message routing, transformation, and integration with external healthcare systems, and developed backend components using **Java and Kotlin** to process patient, appointment, billing, and operational data.
- Developed analytics services to process **patient volume, appointment cancellations, provider utilization, department performance, and patient waiting-time data**, providing aggregated information for healthcare operational dashboards.
- Containerized Spring Boot Microservices using **Docker** and deployed application services on **AWS**, supporting scalable and independently deployable healthcare application components.
- Integrated **Amazon S3** for storage and retrieval of patient documents and medical reports and utilized **Splunk on Linux environments** for centralized application logging, monitoring, and production troubleshooting.
- Developed **JUnit** unit and integration tests for React-integrated REST APIs, Spring Boot services, business logic, Spring Data JPA repositories, and Kafka producers/consumers to ensure application reliability.
- Utilized **Gradle, SonarQube, Git, IntelliJ IDEA, JIRA** for build automation, code-quality analysis, version control, code reviews, sprint planning, defect tracking, and continuous application improvement.

Client: Adidas - Portland, OR

Nov 2020 - Aug 2022

Role: Software Developer

Responsibilities:

Responsibilities:

- Developed responsive **React JS** interfaces for account management, fund transfers, digital payments, transaction history, and beneficiary management, delivering intuitive customer-facing banking experiences.
- Built reusable **React components, forms, dashboards, tables, and navigation components** using JavaScript, HTML5, and CSS3 to maintain consistency across banking modules.
- Implemented client-side **form validation, event handling, routing, and state management** for payment and account workflows, improving usability and data accuracy.
- Integrated React applications with **RESTful APIs** to retrieve account information, initiate transactions, process payments, and display real-time transaction status.
- Developed interactive customer dashboards with **search, filtering, transaction tracking, payment status, account summaries, and notification interfaces**, ensuring responsive and cross-browser-compatible designs.
- Developed scalable backend services using **Java , Spring Boot, Spring MVC, Spring Data JPA, Hibernate, and RESTful Web Services** within a microservices architecture.
- Designed **microservices** for accounts, transactions, payments, beneficiaries, authentication, and notifications, supporting independently deployable banking services.
- Integrated **Apache Kafka** and developed producers and consumers for asynchronous communication, real-time transaction events, payment processing, and notification workflows.
- Implemented persistence and business logic using **Hibernate, JPA, JDBC, Oracle, PL/SQL, Java Streams, Lambda Expressions, and Spring transaction management**.
- Implemented **Spring Security**, authentication, authorization, exception handling, and role-based access control to secure customer information, APIs, and financial operations.
- Containerized Spring Boot microservices using **Docker** and deployed them on **AWS ECS/EKS**, supporting scalable and highly available cloud-based banking services.
- Leveraged **AWS Lambda, API Gateway, RDS, and S3** for serverless processing, API management, relational data storage, and secure storage of banking documents and application artifacts.
- Configured **AWS IAM and CloudWatch** for access control, application logging, performance monitoring, metrics, alarms, and operational troubleshooting across cloud environments.
- Developed and executed **unit, API, integration, and regression tests** using JUnit and related testing practices to validate microservices, REST APIs, transaction workflows, and application reliability.

Role: Java Developer Intern

Responsibilities

- Developed responsive **ReactJS** interfaces for **employee profiles, attendance tracking, leave management, benefits, payroll records, and HR reporting** using **JavaScript, HTML5, CSS3, and Bootstrap**.
- Built reusable **React components** for employee dashboards, payroll summaries, leave request forms, attendance views, data tables, navigation, and HR administrative workflows.
- Implemented **form validations, event handling, conditional rendering, and dynamic UI updates** to support employee onboarding, profile management, leave requests, and payroll-related operations.
- Integrated **ReactJS frontend components with REST APIs** to retrieve and display employee, attendance, leave, benefits, payroll, and reporting data from backend services.
- Developed **role-based user interfaces** for **employees, managers, and HR administrators**, providing appropriate functionality and application views based on user roles.
- Developed backend services using **Java 8, Spring Boot, and Spring MVC** to support **employee management, attendance, leave, benefits, payroll processing, and reporting workflows**.
- Designed and implemented **RESTful Microservices** for employees, attendance, leave, payroll, benefits, and reporting modules, supporting modular and maintainable application architecture.
- Implemented persistence and data-access layers using **Spring Data JPA, Hibernate, JDBC, and Oracle** to manage employee, payroll, attendance, benefits, and transactional data.
- Developed **Oracle SQL and PL/SQL procedures, functions, packages, triggers, and queries** to support **payroll calculations, employee data processing, reporting, and data validation**.
- Implemented **business logic, transaction management, input validation, exception handling, and secure backend workflows** to maintain reliable processing across HR and payroll services.
- Containerized application services using **Docker**, providing consistent runtime environments for development, testing, and deployment.
- Configured **Jenkins CI/CD pipelines with Maven and Git** to automate **build, testing, packaging, and deployment processes** across application environments.
- Supported deployment and operational activities for **Java/Spring Boot microservices**, including application configuration, release validation, logging, and troubleshooting.
- Performed **functional, integration, REST API, regression, and end-to-end testing** using **Postman and JUnit** to validate HR and payroll workflows, API responses, and application functionality.
- Conducted **Oracle and SQL database testing** to validate **payroll calculations, employee records, CRUD operations, stored procedures, transactions, and data integrity**, and performed defect retesting after application fixes.

Education:

Master's in Computer Science, Florida Atlantic University, Boca Raton, Florida

Bachelor's in Computer Science, Vignana Bharathi Institute of Technology, Hyderabad, India
